ROWAN BRAD QUNI-GUDZINAS

Autonomous AI systems researcher

Amsterdam, Netherlands · rowan.quni@qnfo.org · qnfo.org · ORCID 0009-0002-4317-5604 · LinkedIn

Earlier work is published under **Brad Gudzinas**.

SUMMARY

Systems researcher studying autonomous AI systems: how they are structured, how they behave in operation, how they fail, and how people can audit and govern them. Twenty years of systems work behind it: transportation network and GIS work from my first role in 2004, transportation network models at DVRPC and IBI Group, the national Tour-Based Model System for long-distance travel at the U.S. Federal Highway Administration, data-driven decision support at AARP, and machine-learning engagements at Deloitte. Since 2024 I have designed and run QNFO, an autonomous research system of 39 live agents, and published what it delivers, what it costs and where it fails. In 2026 I began launching that fleet as its own product, Ultrastable (ultrastable.io), a self-governing development platform that chooses its own work, proves each change live and scores its own decisions; I direct it, and coding agents write its code. Open to autonomous and AI systems research and strategy, AI evaluation and assurance, AI governance and oversight, research program leadership for AI, and founder-in-residence or product strategy roles for autonomous systems.

EXPERIENCE

Founder and Director

Ultrastable (autonomous development platform, ultrastable.io) | 2026 to present

- Launching the system that runs QNFO as its own platform: a self-governing development platform that finds its own work in its metrics and failures, hands each change to coding agents from several vendors, proves every deploy with live probes and automatic rollback, and scores its decisions against the predictions it logged first.
- My role is systems design and direction, not coding: I set the platform's goals, standing directives and limits, and evaluate how it behaves; coding agents write the code.
- Evidence, re-checked by the running system and published live at ultrastable.io: 3,880 merged changes since August 2026; 774 of 1,059 scored decisions matched their logged prediction; 0 silent drops across 6,000+ closed issues.
- Stated limits: one installation so far (QNFO), hundreds of open issues against a target of zero, and decision scoring that the system grades itself.

Founder and Systems Researcher

QNFO (independent research on autonomous AI systems) | 2024 to present

- Designed and operate an autonomous research system on Cloudflare (39 live workers) that drafts, referees, revises, versions, publishes and corrects papers, with standing objectives, health checks and a failure ledger.
- Built QNFO as the first installation (customer zero) of Ultrastable, the platform listed above.
- Reported how the system behaves in operation: Operating the Quniverse Fleet sets out its objectives, successes, failures and roadmap.
- Designed oversight methods for AI-assisted work: The Universal Ignorance Audit and Epistemic Legibility in AI-Assisted Science.
- Proposed JPCUB, a whole-system cost measure for computing (joules per correct answer), with a measurement protocol and an extension to stochastic and agentic LLM inference.

- Publish an open library of preprints with DOIs (papers.qnfo.org) and a knowledge graph that other tools can query by API.

Executive Director and Founder

Empowering Change (nonprofit) | San Francisco, CA | 2023 to 2024

- Took the nonprofit from incorporation to public launch.
- Led an LLM legal-navigation tool for self-represented litigants: document drafting, procedural guidance and plain-language translation of legal terms.

Platform Data Product Manager

iManage | 2022 to 2023

Senior Product Manager

Epsilon (Publicis Groupe) | 2021 to 2022

- Managed data products built on predictive machine-learning models.

Product Manager and Senior Methods Advisor

AARP Public Policy Institute | Washington, DC | 2016 to 2021

- Led the AARP Livability Index, a national decision-support system: 50+ data sources across 7 domains, scoring U.S. neighborhoods nationwide, across multiple public releases.
- Co-authored the Livability Index 2018 report and AARP policy work on housing affordability, including the 2016 analysis of Low-Income Housing Tax Credits.
- The Index and its method are cited in 20+ academic and policy studies.

Senior Data Scientist

The Advisory Board Company | 2016

Senior Associate, Data Analytics

Deloitte Consulting LLP | Washington, DC | 2015 to 2016

- Delivered analytics and machine-learning engagements for federal and public-sector clients.
- Co-authored a 2016 Transportation Research Board paper on updating the National Household Travel Survey with American Community Survey data.

Data Analyst and Research Manager

U.S. Department of Transportation, Federal Highway Administration | Washington, DC | 2011 to 2015

- Specified the national Tour-Based Model System, a simulation of long-distance passenger travel across the United States, and directed the contractor team that built it.
- Co-directed the $10M U.S. DOT National Household Travel Survey.
- Managed a $1.5M+ federal research portfolio as a certified Contracting Officer's Representative: technical oversight, budgets, milestones and acceptance of contractor deliverables.
- Presented national long-distance travel data needs at the 2011 TRB National Household Travel Survey workshop.

Earlier roles: transportation networks, systems planning and GIS

Role	Organization	Period
Consultant: built and ran transportation network models	IBI Group	2008 to 2011
Systems Planner: built and ran transportation network models	Delaware Valley Regional Planning Commission	2005 to 2008

Role	Organization	Period
GIS Analyst	Cross County Connection TMA	2004 to 2005

SELECTED WORK

1. Operating the Quniverse Fleet: Objectives, Successes, Failures, and Roadmap of an Autonomous Cloud Research System (2026)
2. The Universal Ignorance Audit (2026)
3. Epistemic Legibility in AI-Assisted Science (2026)
4. Joules-per-Solution for Stochastic and Agentic Inference (2026)
5. Tour-Based National Model System, FHWA (2014, as Brad Gudzinas)
6. AARP Livability Index 2018 report (co-author, as Brad Gudzinas)

Every QNFO paper is prepared with an AI-assisted research pipeline; the author is responsible for its content. Full library: papers.qnfo.org. All records: Zenodo.

EDUCATION

- **M.S., City and Regional Studies**, Rutgers University, Edward J. Bloustein School of Planning and Public Policy (2008)
- **B.A., Urban Studies and Community Planning**, Rutgers University-Camden (2004)

CERTIFICATIONS

- Project Management Professional (PMP), Project Management Institute (2016)
- Contracting Officer's Representative (COR), Defense Acquisition University (2011)
- American Institute of Certified Planners (AICP), American Planning Association (2009)

SKILLS

Autonomous and agentic system design · operating and monitoring multi-agent systems · failure analysis · oversight and audit methods for AI-assisted work · systems modeling · travel-demand and simulation modeling · statistical modeling and applied machine learning · data-driven decision support · GIS · research program management · federal contract oversight

Tools I direct and work with: Python, SQL, Cloudflare Workers, GIS (ArcGIS, QGIS), LLM agent frameworks.
